With objective skills data, a global luxury brand finally scaled hiring, and candidates felt more connected to the brand

From interns to senior client advisors, every candidate is now assessed on the skills their role needs, including storytelling.

THE PROBLEM

The skills that sell luxury were judged on gut feel.

Client advisors sell through storytelling and relationships. Those skills were judged in unstructured interviews, each with its own bar.

WHAT WAS AT STAKE

One wrong client-facing hire can damage years of relationships.

78% of customers say one negative interaction with a sales advisor can make them abandon a purchase.[1] Hiring on instinct is a risk nobody can afford.

WHAT CHANGED

The luxury experience made relevant with scientific precision - at scale

01 **A custom Narrative Communication skill**, built for luxury sales, not an off-the-shelf test.

02 **Calibrated to every role and level**, so every candidate is compared on objective evidence.

03 **Questions relevant to each role**, in the brand's identity at every touchpoint.

WHY NOT THE USUAL FIXES

More interviews	Subjective, can't scale
Inferred skills	Guesses, not evidence
Off-the-shelf tests	Generic, not your model
Assessment centres	Slow and costly

THE RESULT

People felt more connected to the company, not tested

Every hiring decision now rests on comparable skills data. Top praise: **questions relevant to their actual role.**

IN THEIR WORDS

"Candidates value the clear instructions, the smooth flow, and the relevance of the questions."

Head of Talent, global luxury brand

WHAT'S NEXT

One skills language across the lifecycle. The framework that hires today can inform mobility and succession tomorrow.
